

MVP1 – Calculation Scope

Purpose

This document defines the **MVP1 pricing calculation system** for Prysm. It is intended as a handoff-ready specification for software development and product alignment.

MVP1 focuses on:

- Market-aligned, fixed-scope project pricing
- A deterministic, transparent calculation engine (internally)
- A simple user-facing experience with a single recommended price output

Explanations, AI-driven reasoning, and marketplace-based recommendations are explicitly **out of scope for MVP1** and reserved for MVP2.

Core Pricing Formula

All pricing in MVP1 follows the same calculation path.

Final Price =

None

```
Project Type Base Price
× Timeline Multiplier
× Complexity Multiplier
× Client Type Multiplier
× Experience Level Multiplier
```

There are:

- No additive fees
- No weighted averages
- No user overrides to the formula

All modifiers are multiplicative and cumulative.

Project Type Base Prices

If the user selects a known project type, pricing begins at the corresponding base price below.

If a project type is **not listed**, Prysm defaults to an **average base price of \$2,650**.

Design, Brand, and Creative

- Brand identity (logo, colours, typography) — \$5,000
- Marketing collateral (deck, brochure, one-pager) — \$1,500
- Social media design kit (templates) — \$1,200
- Website UX/UI design — \$3,500
- App or SaaS interface design — \$4,500
- Product or feature redesign — \$3,000

Web and Digital Build

- Website build (custom or CMS) — \$4,000
- Website redesign or rebuild — \$3,500
- Landing page build — \$2,000
- Front-end build from designs — \$3,500
- UI implementation for site or app — \$3,000
- Performance or UI optimization project — \$2,500

Content and Media

- Content package (defined deliverables) — \$1,500
- Campaign-based content creation — \$2,000
- Brand content sprint — \$1,800
- UGC video package — \$1,200
- Product-focused content shoot — \$1,000
- Campaign-specific UGC content — \$1,500
- Brand or lifestyle photoshoot — \$1,800
- Product photography shoot — \$1,500
- Event photography (single event) — \$2,000
- Brand video project — \$3,500
- Promotional or launch video — \$3,000
- Event video coverage — \$2,500

Illustration and Editorial

- Custom illustration project — \$1,500

- Illustration set for brand or web — \$2,000
- Editorial or publication illustration — \$1,200
- Manuscript editing — \$2,000
- Long-form content editing — \$1,500
- Editorial review and refinement — \$1,200

Copy, Strategy, and Marketing

- Website copywriting — \$1,500
- Brand messaging or tone-of-voice — \$2,000
- Sales page or email sequence — \$1,800
- Social media strategy setup — \$1,500
- Content calendar creation — \$1,200
- Platform audit and recommendations — \$1,000
- Marketing strategy project — \$2,500
- Campaign planning and setup — \$2,000
- Funnel or launch strategy — \$3,000
- SEO audit — \$1,500
- On-page SEO optimization (defined scope) — \$2,000
- Keyword research project — \$1,200

Brand and Go-to-Market

- Brand positioning and strategy — \$4,000
- Brand messaging framework — \$3,000
- Rebrand strategy project — \$4,500
- Go-to-market strategy — \$3,500
- Campaign or launch consulting project — \$2,500
- Marketing audit and recommendations — \$2,000

Operations, Advisory, and Systems

- Project setup and planning — \$2,000
- Launch or campaign management (fixed scope) — \$3,000
- Short-term project coordination — \$2,500
- Strategy audit — \$2,500
- Advisory project (fixed duration) — \$3,000
- Systems or process design — \$3,500
- Coaching package (fixed sessions) — \$2,000
- Intensive or deep-dive program — \$3,500
- Workshop or facilitated session — \$2,500

Engineering and Product

- Backend system build — \$5,000
 - API or integration project — \$4,000
 - Database or infrastructure setup — \$4,500
 - MVP application build — \$6,000
 - Feature-complete app build — \$8,000
 - Product rebuild or major upgrade — \$7,000
-

Multipliers

Timeline

- Rush — $\times 1.5$
- Tight — $\times 1.25$
- Standard — $\times 1.0$
- Flexible — $\times 0.9$

Complexity

- Very Complex — $\times 2.0$
- Complex — $\times 1.5$
- Moderate — $\times 1.2$
- Simple — $\times 1.0$

Client Type

- Enterprise — $\times 2.5$
- Medium-Large Business — $\times 1.8$
- Small Business — $\times 1.4$
- Startup — $\times 1.0$
- Individual — $\times 1.0$
- Non-Profit — $\times 0.85$

Experience Level

- Industry Leader — $\times 4.0$
- Expert — $\times 3.0$
- Experienced — $\times 2.0$
- Intermediate — $\times 1.5$
- Beginner — $\times 0.5$

MVP1 rule: Experience level is **not user-selectable** in the calculator.

All calculations automatically apply:

None

Experience Level = Beginner ($\times 0.5$)

This reflects Prysm's target user: freelancers with approximately 1–3 years of experience.

User Experience Flow (MVP1)

First Login / Onboarding

1. User logs in
2. User selects type of freelancer
3. User enters city where business is based
4. User selects province where taxes are paid
5. User enters years of experience in the field
6. User enters monthly income goal
7. User clicks **Save**

All data collected here is stored for future personalization and marketplace intelligence, but does **not** directly affect MVP1 pricing calculations.

Pricing Calculator Flow

1. User navigates to the **Pricing Calculator** from the dashboard
2. User selects **Project Type**
3. User enters **Current Hourly Rate**
 - Optional numeric input
 - Or selects: "I haven't calculated this before"
 - Hourly rate is collected for data purposes only and does not affect pricing in MVP1
4. User enters **Estimated Project Hours**
 - Collected for future intelligence and validation
 - Not used in MVP1 pricing calculations
5. User selects **Timeline**
6. User selects **Complexity**
7. User selects **Client Type**
8. User submits calculation

Output (MVP1)

- Prysm returns **one single recommended project price, along with one optimistic price and one conservative price.**
 - No explanation or breakdown is shown (*if we are able to put an explanation without AI/ML then lets do that, if not we will work on that being MVP2.*)
 - Internal calculation logic is stored for future AI-driven explanation in MVP2
-

Out of Scope (Explicit)

The following are intentionally excluded from MVP1:

- Market comparison benchmarks
- Location-based pricing adjustments
- AI recommendations or warnings
- Dynamic experience-level scaling

These will be addressed in MVP2 or beyond.

Summary

MVP1 establishes Prysm's pricing engine as:

- Structured
- Deterministic
- Market-aligned
- Calm and authoritative

The calculation logic is intentionally rigid in MVP1 so that future intelligence can be layered on without refactoring the core system.
